

November 22, 2017

To Whom it may concern:

Mr. Pierre-Baptiste Bouillon successfully completed two 6 months internship at Oberthur Technologies near Boston MA. His first internship was from May to October 2016 followed by a second term during same period in 2017. Mr. Bouillon reported directly to Director of Engineering for Digital Wallet. During his internship Mr. Bouillon started by addressing defects in various customer project such as Lyca Mobile in UK. He quickly gained respect of senior developers who trusted him with new features implementation for Lyca Mobile. In his second term, he was task to improve the quality of the code by implementing various component designs into the user interface of the core platform. In addition he was given the responsibility of coaching a young intern and support her during her internship.

He is not only a hard worker but extremely well organized. He plans his tasks with great diligence, keeping deadlines in mind. In a short amount of time and with little guidance, he was able to have a good understanding of our complicated platform and vast code base. His peers had nothing but praises for him, in particular about the quality of his code. His feature implementation was completed in timely manner with few issues raised by the Quality Assurance team. He would be a great asset to any software development team.

Sincerely;

Babak Aliabadi

Director of Engineering
Digital Wallet/ Digital Lab.
